

Every cut is expensive... without the right bandsaw

AEW Delford is widely recognised as the leader in high speed, precision bandsaws for the food industry. Higher blade speeds and increased motor power mean that our machines can deliver improved cutting yields, accuracy, cut quality and hygiene.

High blade speeds result in cleaner cuts without bone chips or splinters. Our blade guidance system and 'turn-to-stop' automatic blade tensioning allows the use of thinner saw blades producing higher cutting yields. Blade changes are faster, without the need for removal of table-tops or guides.

Drive wheels are precision machined, nickel plated and balanced to ensure quiet, vibration free running on high quality bearings and driven by powerful TEFC motors.
